

Export Your Podcast

Once your final track has been edited, and you have your effects and audio, it's time to export it. Simply go to File and Export as MP3 or whichever type of file you would like to create!

Edit Your ID3 Tags

Before you export your podcast, if you would like your project to have some more information simply go to Project and Edit ID3 Tags. This feature will allow you to add information about your project and will appear on MP3 players while people are listening to your podcast.
